**Appendix G**

**List of Averages--Region Summary,  
State of Oklahoma, Grade 11 (1993)**

## **GRADE 11**

**NOTE:** Appendix G of this report offers district level test results. Deleted from these reports were scores from school districts in which five or fewer students were tested at any given grade level. This was done to protect the privacy of individual students in those school districts.

## OVERVIEW

The Oklahoma School Testing Program, mandated as described in 70 O.S. Supp. 1988, Section 1210.508 (Senate Bill 183), requires that norm-referenced tests be administered to students in grades 3, 5, 7, 9, and 11 in order to obtain information about how the performance of Oklahoma students in these grades compares to that of students in a national sample. The Oklahoma State Board of Education adopted the Riverside Basic Skills Assessment Program, published by The Riverside Publishing Company, to fulfill this requirement. Under this assessment program, the *Iowa Tests of Basic Skills® (ITBS®)* were administered in grades 3, 5, and 7, and the *Tests of Achievement and Proficiency™ (TAP®)* were administered in grades 9 and 11.

This *Interpretive Guide* is designed to help you understand, explain, and use the results of the Oklahoma School Testing Program. In the Oklahoma program, student scores are reported by subject and skill area at the individual level for all grades and at the classroom level for grades 3 and 5 only. The scores are aggregated to building and district levels for all grades.

This *Guide* describes the tests used for the Oklahoma School Testing Program in grades 3, 5, 7, 9, and 11; discusses the individual and classroom reports; describes each of the scores they display; and suggests ways in which the test results may be used. It should be remembered that test scores are only one measure of a student's ability and should be used together with other information about the student's achievement. The teacher's knowledge of student characteristics that might influence test performance should be considered when interpreting individual test scores.

## THE TESTS

The *ITBS* and *TAP* are standardized achievement tests covering reading, language, mathematics, and work-study skills, as well as social studies and science.

A standardized achievement test is a test that has been given, using specified directions and under specific conditions, to a representative group of students. Scores obtained from this "standardization" program are the norms that permit the test user to

compare the performance of his or her students with that of this larger, representative group. The norms, then, provide a method for comparing the achievement of students in any class with that of typical students of the same age and grade. They also provide a method of realistic comparison of the ability of individual students with students outside their own class and who are from a broadly representative group. The national norms used in Oklahoma are based on the 1987-88 school year.

For *ITBS*, scores are reported for the tests, totals, and composites listed below. The Complete Composite score represents the average of the scores for the subject areas of Vocabulary, Reading Comprehension, Language Total, Work-Study Total, and Mathematics Total. The Total Composite score also includes the scores for Social Studies and Science.

- Vocabulary
- Reading Comprehension
- Spelling
- Capitalization
- Punctuation
- Usage and Expression
- Language Total
- Visual Materials
- Reference Materials
- Work-Study Total
- Mathematics Concepts
- Mathematics Problem Solving
- Mathematics Computation
- Mathematics Total
- Complete Composite
- Social Studies
- Science
- Total Composite

For *TAP*, scores are reported for the tests and composites listed below. The Basic Composite score represents the average of the scores for the subject areas of Reading Comprehension, Mathematics, Written Expression, and Using Sources of Information. The Complete Composite score also includes the scores for Social Studies and Science.

- Reading Comprehension
- Mathematics
- Written Expression
- Using Sources of Information
- Basic Composite

Social Studies  
Science  
Complete Composite

## THE SCORES

The scores reported for the Oklahoma School Testing Program provide different ways for identifying individual and group strengths and weaknesses in reading, language, work-study skills, mathematics, social studies, and science. The various scores also provide numerous ways to determine how well each student is meeting the skills specified for his or her grade.

The following scores are provided under the Oklahoma statewide program: Raw Score, Standard Score, Grade-Equivalent, National Percentile Rank, National Stanine, Normal Curve Equivalent, and State Percentile Rank and Stanine. For districts with 2,200 or greater average daily membership (ADM), Local Percentile Ranks and Stanines are also provided.

The midpoint of the ITBS/TAP Spring Standardization was April 30. Oklahoma state testing was done during the last two weeks of March and the first two weeks of April. Consequently, interpolated ITBS/TAP National Percentile Ranks for the quarter month March 23 to March 30 were used. In addition, the corresponding National Normal Curve Equivalents and National Stanines are also interpolated.

### A. Raw Score

*Definition.* A raw score is the number of items answered correctly for a subtest or subject. It does not indicate which items are answered correctly.

*Uses.* The raw score provides an indication of the variability in performance among students in the classroom. Raw scores are converted into derived or norm-related scores such as the Standard Score, Grade-Equivalent, and Percentile Rank which are described later.

*Limitations.* A raw score by itself has no meaning. It can be interpreted only by comparing it with some standard such as the total number of items for a subtest or subject, or with

the raw scores earned by a comparison or norm group.

### B. Standard Score

*Definition.* Standard Scores are produced from a single scale of scores that is continuous from kindergarten through the twelfth grade and across all test levels. Standard Scores on the ITBS and TAP range from 10 through 290.

*Uses.* The major use of the Standard Score is for measuring achievement growth of students or groups of students from year to year. Within a school or district, successively higher Standard Scores from grade to grade would be expected.

*Limitations.* Each subtest within a subject and each subject area has its own developmental standard scale. Thus, the Standard Score for one subject cannot be compared with the Standard Score for another subject. For example, Standard Scores cannot be used to compare the results for reading with the results for mathematics. Percentile Ranks should be used for this kind of comparison.

### C. Grade-Equivalent

*Definition.* The Grade-Equivalent score describes test performance in terms of a grade level and the months since the beginning of the school year. For example, a score of 73 represents the seventh grade and third month. A Grade-Equivalent score tells you the average grade level of the students in the norm group who scored the same as a particular student or class.

Unlike the method used by other test publishers, Riverside does not use decimals for Grade-Equivalent scores at the individual student level. Like Standard Scores, Grade-Equivalent scores are most useful for monitoring growth. They are simple, meaningful, and have direct normative (comparative) meaning. They also have technical properties that are very similar to developmental standard scores and, because of this, share most of the same advantages and disadvantages. Both types of scores are based on the same standardization data from grade-referenced groups, and a one-to-one relationship exists

between these two scales. Both reflect increasing variability in achievement as students progress through the grades.

*Uses.* The Grade-Equivalent indicates whether a student or group of students is doing better than, as well as, or not as well as an average student of the same grade level at a given month of the school year. Grade-Equivalent scores are also useful to measure achievement growth from one test administration to another.

*Limitations.* The Grade-Equivalent score does not tell you what grade a student should be in nor that a student has the skills to do work beyond his or her grade level. This is because all Grade Equivalent scores are based on test content specific to the *ITBS* or *TAP* level which was administered. There is no direct basis for predicting the student's performance on different test content.

**In discussing the results with parents or guardians, it is particularly important to inform them about the limitations in interpreting Grade-Equivalents for an individual student.**

#### **D. Percentile Rank**

*Definition.* A Percentile Rank score indicates the percentage of students in the norm or reference group whose scores for a subtest fell below a particular student's raw score. National Percentile Ranks are based on the performance of a representative group of students nationwide. State and Local Percentile Ranks are based on the performance of a statewide group or local group of students.

**Note:** The Percentile Rank is based on percentages of **students** earning different raw scores, while the percent correct score, described in Section I, refers to the percent of **items** answered correctly within a subtest or subject area.

*Uses.* The Percentile Rank, reported in units that range from 1 through 99, is perhaps the most useful and readily understood score for interpreting student achievement. Their primary

use is to diagnose strengths and weaknesses in a student's educational development across different subject areas. Percentile Ranks describe performance in small, fairly precise units which are meaningful in and of themselves. These units clearly state performance relative to the norm group. For example, a Percentile Rank score of 58 means that the student earned a raw score that was higher than 58 percent of the students in the norm group who were in the same grade and took the same test.

*Limitations.* The Percentile Rank is based on the frequency that each raw score occurred in the norm group and denotes the percentage of individual scores which fell below a selected point. Generally, very high and very low scores are infrequent while middle scores are frequent. Smaller differences in raw score points are therefore needed to move from one Percentile Rank to another for middle scores, while greater differences in raw score points are needed to move from one Percentile Rank to another for very high or very low scores. For example, perhaps the difference of one or two raw score points might be necessary to move from a Percentile Rank of 50 to 55, while differences of as many as five raw score points might be necessary to move from a Percentile Rank of 5 to 10, or 90 to 95. The Percentile Rank magnifies small differences in middle raw scores while reducing the differences in very high and very low raw scores.

#### **E. Stanine**

*Definition.* Stanine scores express test results in nine equal steps which range from one (lowest) to nine (highest). The average Stanine is a score of five. Stanines, which are similar to Percentile Ranks, are relatively easy to use because they are all one-digit numbers.

In general, Stanine scores one, two, and three are well below average; four is slightly below average; five is average; six is slightly above average; and seven, eight, and nine are well above average.

*Uses.* Stanine scores are another way of comparing student or classroom performance with that of

the norm group. Stanines and Percentile Ranks may be directly compared as illustrated in Figure 1. Note that Stanines in the middle encompass a larger number of Percentile Rank scores than do the extremes of the Stanine distribution.

Figure 1. Normal Distribution of Stanines, Percentile Ranks, and Normal Curve Equivalents

*Limitations.* Stanines are less precise than Percentile Ranks. However, a difference of a few raw score points does not affect the Stanine as much as it may affect the Percentile Rank.

#### F. Normal Curve Equivalent

*Definition.* Normal Curve Equivalents (NCE's) derived from Percentile Ranks, are normalized Standard Scores with a mean of 50. NCE's are the scores which result from dividing the normal curve into 99 equal units. This assures the equality of the magnitudes of the differences between NCE's. For example, the difference between NCE's of 45-50 is equal approximately to the difference between NCE's of 90-95.

*Uses.* NCE's are most often used in evaluating results from Chapter 1 programs. NCE's used in Chapter 1 evaluation must be based on established norms for a particular grade and time of year. This requirement leads to the standardization and comparability of test reporting procedures.

When calculating group NCE averages to determine year-to-year progress, only the scores

for those students who were administered the test each year should be used. All other student scores should be eliminated.

To help teachers and counselors interpret test results more accurately without a lot of statistical calculations, the Riverside Publishing Company has established a "Rule of Thumb" for determining relative strengths and weaknesses in subtests based on the student's composite NCE.

Subtract 12 from the student's composite NCE. Any subtest NCE's that are below this number may be considered relative weaknesses.

Add 12 to the student's composite NCE. Any subtest NCE's that are above this number may be considered relative strengths.

*Limitations.* One major limitation on the use of NCE's should be noted. This relates to the use of NCE's for evaluating Chapter 1 data. While it is true that reporting procedures for various test batteries have been standardized, it does not mean that scores from different test batteries are interchangeable.

#### G. State and Local Percentile Rank

*Definition.* State and Local Percentile Ranks indicate the relative standing of a student in comparison with other students of the same grade across the state or from the local group, all of whom took the same test at the same time. Like National Percentile Ranks, State and Local PR's range from a low of 1 to a high of 99, with 50 denoting average performance for the group. The Percentile Rank corresponding to a given score indicates the percentage of students in the same grade in the state or local group obtaining scores equal to or less than that score. On reports provided for the Oklahoma School Testing Program, State Percentile Ranks are reported for all districts; Local Percentile Ranks are reported only for districts with an ADM greater than 2,200.

*Uses.* State and Local Percentile Ranks are useful for comparing a student's performance on a

particular test with the performance of his or her peers statewide or locally.

*Limitations.* State and Local Percentile Ranks are subject to the same limitations as National Percentile Ranks.

#### H. State and Local Stanine

*Definition.* State and Local Stanines are similar to State and Local Percentile Ranks in that they reflect the student's standing relative to the local group rather than to the national group. Like National Stanines, State and Local Stanines are scores that range from a low of 1 to a high of 9, with 5 denoting average performance.

*Uses.* State and Local Stanines identify broad performance categories in which Stanine scores of 1, 2, and 3 are usually considered to reflect below-average performance; 4, 5, and 6, average; and 7, 8, and 9, above average when compared with the state or local group of the same grade.

*Limitations.* State and Local Stanines are subject to the same limitations as National Stanines.

#### I. Percent Correct Score

*Definition.* Percent correct scores (reported on the Group Item Performance Record, the Group Performance Profile, and the Oklahoma Suggested Learner Outcomes) show the **percent of test items** students answered correctly on each of the *ITBS* and *TAP* category objectives (skills). These figures are derived by dividing the number of items answered correctly by the total number of items within the skill area. For example, in a class of 10 students, a total of 200 test items was administered for a skill (10 students x 20 items). If the students collectively answered 136 of these items correctly, their percent correct score for that skill would be 68 (that is,  $136 \div 200 = 68$  percent).

*Uses.* There are at least three ways in which a percent correct score might be analyzed: a) to determine a general absolute performance level; b) to compare it with the current performance of other classrooms of the same grade and the national norm group; and, c) to identify year-to-year trends. Percent correct scores also indicate

the average difficulty level of a skill for the students and the norm group. Generally, the average percent correct scores for the norm group range between 45 and 65.

*Limitations.* Percent correct scores should not be compared for different skill areas since the skill areas may vary in difficulty.

#### J. Applied Proficiency Skills

An Applied Proficiency Skills score is provided for *TAP* only. Sixty-three specific items from the first four tests—Reading Comprehension, Mathematics, Written Expression, and Using Sources of Information—draw directly on tasks that high school students and young adults face in everyday situations. The number right and the rank (LOW, MED, or HIGH) on these items are reported on the Pupil Profile Narrative, the Student Press-on Labels, the List Report of Pupil Scores, and the Local Norms Frequency Distributions.

The score on these items, referred to as the Applied Proficiency Skills Score, reflects how effectively students can apply practical skills in reading, mathematics, written expression, and finding and interpreting information. While high school programs are designed to prepare students for additional education and to develop in them an understanding of the basic subject areas, attention is also needed for maintenance and enhancement of skills that have wide application in everyday life. Students who earn scores in the low range may have difficulty responding effectively to tasks they will face in everyday life, and students' attention to these basic skills in their high school courses would be suggested.

The Applied Proficiency Skills score ranges for Form J, 1988 norms are:

| Grade | High | Med.  | Low |
|-------|------|-------|-----|
| 9     | 47+  | 26-46 | 25- |
| 11    | 50+  | 29-49 | 28- |

The overall results for classes and schools will reflect the effectiveness with which the school

program relates basic skills to everyday situations. If a relatively large proportion of scores is in the low or medium range, perhaps teachers and administrators need to consider how courses can be modified to give more attention to the practical side of the content.

#### K. Higher Order Thinking Skills (HOTS)

Both the *ITBS* and *TAP* emphasize the measurement of higher order thinking skills (HOTS); that is, the measurement of cognitive functions that are more complex than the mere recall of information. On each HOTS item the student is required to retrieve information and then operate on it: for example, interpret, infer, classify, analyze, or compare. In Riverside's view, it is mandatory that critical thinking be measured in order to assess the development of thinking skills, as well as content knowledge, among students.

Among the tests in *ITBS* which emphasize HOTS items are the Reading Comprehension, Usage and Expression, and Mathematics tests. Items classified as HOTS items in the Reading Comprehension test require abilities such as drawing conclusions, making predictions, or using induction. In addition, reading items that

require making judgments and those which could not be answered correctly through direct word or phrase matching with the reading selection are labeled HOTS. In the Usage and Expression test, those items which require multiple cognitive steps for solution are labeled HOTS, as well as those items which require subjective judgments about appropriateness, clarity, and sentence structure. Items classified as HOTS items in the Mathematics tests include Mathematics Concepts items that require multiple comparisons, multiple operations, or multiple thought stages and Mathematics Problem Solving items which require the examinee to convert the verbal form of a problem to a mathematical sentence before performing the necessary computation.

In *TAP*, a similar rationale for classifying HOTS items is used, although HOTS items in *TAP* are tied in with four categories of Bloom's Taxonomy: Application, Analysis, Synthesis, and Evaluation.

Riverside's emphasis in measuring HOTS skills is shown in its scoring reports. The *ITBS* and *TAP* skills reports display student and group scores and normative data for the HOTS items under a separate category labeled "Higher Order Thinking Skills".

## THE REPORTS

This section describes the reports provided by the Oklahoma School Testing Program. Samples of each of the reports provided by the statewide program are presented on the following pages. Each sample includes lettered callouts which are referenced in the basic interpretive information provided for the sample. The *ITBS* reports (grades 3, 5, and 7) and the *TAP* reports (grades 9 and 11) are very similar. Therefore, the reports illustrated on the following pages represent the reports for all grade levels.

The following is a listing of the names of reports provided for *ITBS* and *TAP*.

(F) COPY FOR THE PARENT(S) OR GUARDIAN(S) OF MELISSA WESTBROOK

YOUR DAUGHTER, MELISSA, HAS GIVEN THE IOWA TESTS OF BASIC SKILLS (FORM J, LEVEL 11), IN MARCH/APRIL, 1992. MELISSA IS IN THE FIFTH GRADE AT ANDREW ELEMENTARY IN REMINGTON PUBLIC SCH. THIS REPORT WILL HELP EXPLAIN THE DETAILS OF THE TEST RESULTS.

MELISSA'S TOTAL COMPOSITE SCORE IS THE BEST INDICATOR OF HER OVERALL ACHIEVEMENT ON THE TESTS. MELISSA'S STANDING IN OVERALL ACHIEVEMENT AMONG FIFTH GRADE PUPILS NATIONALLY IS SHOWN BY HER COMPOSITE PERCENTILE RANK OF 63. THIS MEANS THAT MELISSA SCORED BETTER THAN 63 PERCENT OF FIFTH GRADE PUPILS NATIONALLY AND THAT 37 PERCENT SCORED AS WELL OR BETTER. MELISSA'S OVERALL ACHIEVEMENT APPEARS TO BE SOMEWHAT ABOVE AVERAGE FOR HER GRADE.

THE SCORES OF ONE PUPIL ARE OFTEN COMPARED WITH OTHER PUPILS' SCORES NATIONALLY. GENERALLY, MELISSA'S SCORES ARE SOMEWHAT ABOVE AVERAGE WHEN DESCRIBED IN THIS WAY. HOWEVER, SKILLS CAN ALSO BE COMPARED WITH EACH OTHER TO DETERMINE AN INDIVIDUAL'S STRENGTHS AND WEAKNESSES. IN MELISSA'S CASE, THE HIGHEST SCORES ARE IN SOCIAL STUDIES AND SCIENCE. THESE ARE STRONG POINTS WHICH CAN BE USED TO IMPROVE OTHER SKILLS. IN MELISSA'S CASE, THE LOWEST SCORES ARE IN VOCABULARY, SPELLING, CAPITALIZATION, PUNCTUATION, AND VISUAL MATERIALS. THESE ARE AREAS IN WHICH MELISSA APPEARS TO NEED THE MOST WORK.

A PUPIL'S COMMAND OF READING SKILLS IS RELATED TO SUCCESS IN MANY AREAS OF SCHOOL WORK, SINCE MOST SUBJECTS REQUIRE SOME READING. MELISSA'S READING SCORE IS ABOUT AVERAGE WHEN COMPARED WITH THOSE OF OTHER FIFTH GRADE PUPILS NATIONALLY. MELISSA'S READING SCORE IS ABOUT AVERAGE WHEN COMPARED WITH HER OWN TEST PERFORMANCE IN OTHER AREAS.

ON THE LEFT, THE SOLID BARS INDICATE MELISSA'S PERFORMANCE COMPARED TO OTHER FIFTH GRADE PUPILS IN THE NATION. THE STRIPED BARS INDICATE HER PERFORMANCE COMPARED TO OTHER FIFTH GRADE PUPILS IN OKLAHOMA.

Dear Parent:

The State Department of Education conducted the seventh annual Oklahoma School Testing Program (OSTP) in March and April, 1992. Your child participated in this program. The purpose of the OSTP is to provide information which will assist teachers in designing an appropriate instructional program for your child.

Results of the tests administered in this program can help you and the school identify your child's skill strengths as well as those achievement areas that may need additional attention. The Oklahoma School Testing Program has provided your school with additional information about your child's achievement. If you have questions about this report and would like to review the complete results, please contact your child's teacher(s), counselor, or principal.

Sincerely,

*Sandy Garrett*

Sandy Garrett  
State Superintendent of Public Instruction

(G)

**PUPIL PROFILE NARRATIVE**  
**(Service 2g)**

One copy of the Pupil Profile Narrative report is provided for each student. Each report should be reviewed carefully before it is distributed to parents.

- (A) Basic student information is provided here. This is an *ITBS* report for Melissa Westbrook in Cindy Reed's fifth grade class.
- (B) Class, building, system, and norms information are provided here.
- (C) The tests, totals, and composites are listed. For *TAP*, Applied Proficiency Skills are also reported.
- (D) Scores reported are State Percentile Rank in the middle column and National Percentile Rank in the right column.
- (E) The State Percentile Ranks are plotted with a striped bar and the National Percentile Ranks are plotted with a solid bar.
- (F) The narrative explains the test data in terms that are easy to understand. The third paragraph of the narrative includes a discussion of relative strengths and weaknesses which is based on the Total Composite, if available, or the Complete Composite, if available. If neither composite is available, strengths and weaknesses are not discussed. For *TAP*, Applied Proficiency Skills are referenced.

Parents often ask questions about the relative strengths and weaknesses noted in the third paragraph. Just as high-scoring students may have relative weaknesses, low-scoring students may have relative strengths.

Students who score at or above the 96th percentile do not have relative strengths and weaknesses mentioned in the third paragraph.

- (G) At the bottom of the narrative is a message from Sandy Garrett, State Superintendent of Public Instruction.

**STUDENT PRESS-ON LABELS**  
(Service 8)

Each student's scores are printed on a two-part label. Each label consists of:

- Ⓐ The larger part on the left can be affixed to the student's cumulative record folder used by the system. It contains all student scores and norms reported on the Service 9b List Reports.
- Ⓑ The smaller part, on the right, contains National, State, and in the case of large districts, Local Percentile Ranks.

## INDIVIDUAL PERFORMANCE PROFILE (Service 12a)

The Service 12a report is used by many systems to provide skills information to parents, although it was originally designed for teachers.

Two copies for each student are provided.

- (A) This section contains student identifying information. This is an *ITBS* report for Melissa Westbrook in Cindy Reed's fifth grade class.
- (B) All of the scores and norms contained on the Service 9b List Report for each student are printed on this report.
- (C) The National Percentile Ranks are plotted with confidence bands in the profile to the right of the scores. The plotting allows for the quick and easy observation of a student's strengths and weaknesses. Bands that do not overlap are particularly worth noting because they can be considered significantly different.

Specifically, the probable error of measurement is used to calculate the accuracy bands around observed scores. An "X" is used to display the observed score. Dashes are used to display the accuracy bands. Together, they represent the observed score plus and minus two-thirds of a standard error of measurement (one probable error of measurement). The bands can be used to predict the probability that a student will receive similar scores on repeated administrations of the test.

- (D) The number of items (N Items), pupil percent correct (Pupil %C) and national percent correct (Nat'l %C) are reported for each skill in each test.
- (E) This section plots the student's skill scores compared to the national averages. The LOW area of the plot represents the lower quarter of the national distribution of scores obtained for the skill; AVG represents the middle half; and HIGH represents the upper quarter.

## NATIONAL PERCENTILE RANK

The graph shows the average number of eggs laid by 100 female houseflies over 12 days. The y-axis is labeled 'AVERAGE' and ranges from 0 to 100. The x-axis is labeled 'LOW' and 'HIGH' and ranges from 1 to 12. The graph shows a peak in egg laying around day 6-7, with a circled 'C' indicating a specific point on the curve.

### GROUP PERFORMANCE PROFILE (Service 12b)

This report is similar to the Individual Performance Profile report in that it provides summary information by class, building, and system.

Two copies are provided by class (grades 3 and 5) and two copies are provided by grade within building and grade within system.

- (A) This section contains identifying information. This is an *ITBS* report for Cindy Reed's fifth grade class.
- (B) The following scores are reported: means for raw score, Standard Score, Grade-Equivalent, and Normal Curve Equivalent plus National and State Percentile Rank and Stanine of the mean NCE.
- (C) The National Percentile Ranks are plotted reporting the performance of the average (or typical) student in the group. The plotting allows for a quick and easy observation of the local group's strengths and weaknesses. Bands that do not overlap are particularly worth noting because they can be considered significantly different.
- (D) The number of items, building percent correct (Bldg %C) if a building report or the system percent correct (Sys %C) if a system report, and the national percent correct (Nat'l %C) are reported for each skill.
- (E) This section provides the percent of local students scoring LOW, AVG, and HIGH for each skill. The local percents can be compared with the national percents. National results show LOW is the bottom 25 percent, AVG is the middle 50 percent, and HIGH is the top 25 percent of the norm group.

Strengths and weaknesses in skills can be observed by noting the percent of students scoring LOW, AVG, and HIGH. If more than 25 percent are in the LOW groups, this indicates that the local group is weak in that skill. If more than 25 percent are in the HIGH group, this indicates that the local group is strong in that skill.

# LIST REPORT OF PUPIL SCORES (Service 9b)

SERVICE 9B: OKLAHOMA PROGRAM  
LIST REPORT OF PUPIL SCORES

## Iowa Tests of Basic Skills

Class/Group CINDY REED

## LIST REPORT OF PUPIL SCORES (Service 9b)

For grades 3 and 5, the students are listed in alphabetical order by class, while for grades 7, 9, and 11, the students are listed in alphabetical order by grade.

List Reports are often under-utilized. They should be the first report that teachers review. The teacher should begin the review with the first student and mark and write on the report. The class averages ought to be looked at last.

- (A) Class (grades 3 and 5), building, system, and norms information are provided. This is an *ITBS* report for Cindy Reed's fifth grade class.
- (B) Student names and other coded information are printed here. Students are listed in alphabetical order by last name and then first name. The birth date and age at time of testing are printed if the birth date was coded on the answer document. Test level taken by the student is printed and sex, (M) or (F), is printed if coded. If Student I.D. Number and Other Information were used, these data will print on line 2. If Chapter 1 and Class A, B, C, and/or D were used, these data will print on line 4.

For *ITBS* (grades 3, 5, and 7), if the student is administered both the Vocabulary test and the Reading Comprehension test, a "Reading Total" score is printed on line 3. Reading Total is not available for *TAP* (grades 9 and 11).

- (C) The scores reported for each student are Standard Score (SS), National Percentile Rank and Stanine (NPR-S), Grade-Equivalent (GE), Raw Score (RS), Normal Curve Equivalent (NCE), and State Percentile Rank and Stanine (SPR-S). For the large districts, Local Percentile Ranks and Stanines (LPR-S) are also reported. The abbreviations for these scores are printed beside each row of scores and are explained at the bottom of each page of list reports.
- (D) Class averages are provided at the end of each class list report for grades 3 and 5 and building averages are provided at the end of each building list report for grades 7, 9, and 11. The average SS, GE, and NCE are obtained by summing the student scores for each test and dividing by the number of students who took each test. The

NATIONAL PR OF AVG NCE is obtained by taking the average NCE to one decimal into a 1,000 entry NCE to PR table, obtaining the associated PR to one decimal, adding .5, and dropping the decimal. The State Percentile Rank and Stanine are obtained by taking the National Percentile Rank of the average NCE into the State FD to obtain the associated State Percentile Rank and corresponding Stanine. This same procedure is done for the Local Percentile Rank and Stanine reported for large districts only.

On the line above the averages, the number of students tested (N) for each test, total, and composite is reported. Variable N-count is used for all tests, totals, and composites. If the number of students tested varies considerably from test to test, interpretation of averages should be done very carefully. If a low-scoring student in a class did not take the Capitalization test and a high-scoring student did not take the Punctuation test, the class averages could be deceiving, especially for a small class, even though the N (number tested) is the same for both tests. **This is why it is very important that all students' scores be reviewed carefully before looking at the averages.**

Below the averages, the total number of students tested is indicated as "N TESTED = XXX".

**REPORT OF BUILDING and SYSTEM AVERAGES**  
(Service 9b)

Two copies of Building and System Averages are provided.

The Report of Building Averages is provided for each building and contains averages for all grades in the building. For grades 3 and 5, this report aggregates all of the classes by building. For grades 7, 9, and 11, these averages are the same as are printed at the end of the List Reports.

The Report of System Averages is provided for each system and contains averages for all grades in the system.

- (A) Building, system, and norm information are reported in this section. This is an *ITBS* Report of Building Averages for Andrew Elementary School.
- (B) Averages for each grade in the building or system are reported here. N is the number of students included in each test, total, and composite average score. N TESTED is the total number of students tested in the building or system.

SS=STANDARD SCORE

NCE=NORMAL CURVE EQUIVALENT

NPR=NATIONAL PERCENTILE RANK

851

**RANKED LIST BY SUBTEST**  
(Service 14b)

For grades 3 and 5, the ranking is by class or building as selected by the district. For grades 7, 9, and 11, the ranking is by building. One copy is provided.

- (A) Class, building, system, and norms information are reported in this section. This is an *ITBS* report for Cindy Reed's fifth grade class.
- (B) The report shown is ranked on Standard Score by class as indicated at the top of the report.
- (C) Ranked lists are provided for all tests, totals, and composites. The name of the test is printed above each ranked list.
- (D) The scores reported are Standard Score (SS), Normal Curve Equivalent (NCE), and National Percentile Rank (NPR).

The ranking is based on the Standard Score. Students having the same Standard Score are reported in alphabetical order by student name.

## GROUP ITEM PERFORMANCE RECORD (Service 6)

One copy is provided by class for grades 3 and 5 and one copy by grade within building and grade within system for all grades.

- (A) The class, building, and system are identified here. This is sheet 1 of 6 for Cindy Reed's fifth grade class.
- (B) This identifies the type of report. There are three different reports: Class, Building, and System. Since this is a class report, the difference (DIFF) reported is "class minus nation" (class average percent correct minus the national average percent correct). The "percent correct" refers to the average percent of items answered correctly by the group.

On the class reports, the heading reads:

Class Report: DIFF = Class minus Nation

On the building reports, the heading reads:

Building Report: DIFF = Building minus Nation

On the system reports, the heading reads:

System Report: DIFF = System minus Nation

- (C) The name of the test is listed at the top of each column. The number tested (N TESTED) for the test reported is printed to the right of the test name. On the class report for grades 3 and 5, the number tested by class (Cls), building (Bld), and system (Sys) is reported; building reports have building and system N; and system reports have system N only. For grades 7, 9, and 11, only building and system reports are provided. The N's reported may vary by test, depending on the number of students completing each test.

- (D) The skill category is printed in capital letters. The skill code for each item (e.g., R, F1, G1) and a brief item description are listed below. Sometimes two categories with relatively few items in each category are combined.
- (E) Each item number is listed in numerical order by skill code. The national percent correct (Nat) is listed to the right of the item number.
- (F) On each class report, the class, building, and system percent correct is listed for each item and for each skill category. The building reports include building and system percents correct. The system report includes only system percents correct. In a single-building system, the building and system report will be identical.

### Percent Correct and the National Percentile Rank

When a class, building, or system is at or slightly above the 50th percentile on a test, it is not unusual to see a local item percent correct score that is slightly less than the national item percent correct score. The converse is also true. The percentile rank comes from the average Grade-Equivalent score or average Standard Score. The percent correct score comes from an accumulation of raw scores. Although there is a direct relationship between raw score and GE or SS and, hence, National Percentile Rank, this relationship is not monotonic. Therefore, a class might have National Percentile Rank of 48 for a test and an average of all item percents of +2. On the next test, the class National Percentile Rank might be 51, and the average of all item percents -1 or -2. This is why it is important that strengths and weaknesses are examined on a relative basis.

# GROUP NARRATIVE SUMMARY (Service 4)

## Iowa Tests of Basic Skills

Published by THE RIVERSIDE PUBLISHING COMPANY

SERVICE 4: GROUP NARRATIVE SUMMARY

OKLAHOMA PROGRAM

Building: ANDREM ELEMENTARY  
 Bldg Code: 99C001101  
 System: REMINGTON PUBLIC SCH  
 Name: MK 03/23 88  
 Order No.: 000-000804-011 ==

Form: J  
 Grade: 5  
 Test Date: 3/92  
 Sheet: 1 of 5

### V VOCABULARY ANDREM ELEMENTARY GRADE 5 N= 74

| V VOCABULARY      | STANINES | ANDREM ELEMENTARY | GRADE 5 NATIONAL |
|-------------------|----------|-------------------|------------------|
| HIGH (7, 8, 9)    |          | 23 %              | 23 %             |
| AVERAGE (4, 5, 6) |          | 72 %              | 54 %             |
| LOW (1, 2, 3)     |          | 5 %               | 23 %             |

#### CONCLUSIONS:

1. ANDREM ELEMENTARY HAS ABOUT THE SAME PERCENT OF HIGH ACHIEVING PUPILS AS DO OTHER SCHOOLS.
2. ANDREM ELEMENTARY HAS MORE AVERAGE ACHIEVING PUPILS AND FEWER LOW ACHIEVING PUPILS THAN DO OTHER SCHOOLS.

(F)  
 THE AVERAGE VOCABULARY STANDARD SCORE FOR ANDREM ELEMENTARY GRADE 5 HAS 136.0. COMPARED WITH THE NATIONAL DISTRIBUTION OF PUPIL SCORES, THE TYPICAL PUPIL AT ANDREM ELEMENTARY SCORED AS WELL OR BETTER THAN 64 PERCENT OF GRADE 5 PUPILS IN THE COUNTRY.

### R READING ANDREM ELEMENTARY GRADE 5 N= 74

| R READING         | STANINES | ANDREM ELEMENTARY | GRADE 5 NATIONAL |
|-------------------|----------|-------------------|------------------|
| HIGH (7, 8, 9)    |          | 41 %              | 23 %             |
| AVERAGE (4, 5, 6) |          | 50 %              | 54 %             |
| LOW (1, 2, 3)     |          | 9 %               | 23 %             |

#### CONCLUSIONS:

1. ANDREM ELEMENTARY HAS MORE HIGH ACHIEVING PUPILS AND FEWER AVERAGE AND LOW ACHIEVING PUPILS THAN DO OTHER SCHOOLS.

THE AVERAGE READING STANDARD SCORE FOR ANDREM ELEMENTARY GRADE 5 HAS 140.1. COMPARED WITH THE NATIONAL DISTRIBUTION OF PUPIL SCORES, THE TYPICAL PUPIL AT ANDREM ELEMENTARY SCORED AS WELL OR BETTER THAN 69 PERCENT OF GRADE 5 PUPILS IN THE COUNTRY.

### L-1 SPELLING ANDREM ELEMENTARY GRADE 5 N= 74

| L-1 SPELLING      | STANINES | ANDREM ELEMENTARY | GRADE 5 NATIONAL |
|-------------------|----------|-------------------|------------------|
| HIGH (7, 8, 9)    |          | 39 %              | 23 %             |
| AVERAGE (4, 5, 6) |          | 47 %              | 54 %             |
| LOW (1, 2, 3)     |          | 14 %              | 23 %             |

#### CONCLUSIONS:

1. ANDREM ELEMENTARY HAS MORE HIGH ACHIEVING PUPILS AND FEWER AVERAGE AND LOW ACHIEVING PUPILS THAN DO OTHER SCHOOLS.

THE AVERAGE SPELLING STANDARD SCORE FOR ANDREM ELEMENTARY GRADE 5 HAS 136.9. COMPARED WITH THE NATIONAL DISTRIBUTION OF PUPIL SCORES, THE TYPICAL PUPIL AT ANDREM ELEMENTARY SCORED AS WELL OR BETTER THAN 63 PERCENT OF GRADE 5 PUPILS IN THE COUNTRY.

### L-2 CAPITALIZATION ANDREM ELEMENTARY GRADE 5 N= 74

| L-2 CAPITALIZATION | STANINES | ANDREM ELEMENTARY | GRADE 5 NATIONAL |
|--------------------|----------|-------------------|------------------|
| HIGH (7, 8, 9)     |          | 20 %              | 23 %             |
| AVERAGE (4, 5, 6)  |          | 66 %              | 54 %             |
| LOW (1, 2, 3)      |          | 14 %              | 23 %             |

#### CONCLUSIONS:

1. ANDREM ELEMENTARY HAS MORE AVERAGE ACHIEVING PUPILS AND FEWER HIGH AND LOW ACHIEVING PUPILS THAN DO OTHER SCHOOLS.

THE AVERAGE CAPITALIZATION STANDARD SCORE FOR ANDREM ELEMENTARY GRADE 5 HAS 133.8. COMPARED WITH THE NATIONAL DISTRIBUTION OF PUPIL SCORES, THE TYPICAL PUPIL AT ANDREM ELEMENTARY SCORED AS WELL OR BETTER THAN 55 PERCENT OF GRADE 5 PUPILS IN THE COUNTRY.

**GROUP NARRATIVE SUMMARY**  
(Service 4)

A report is produced for each test, total, and composite. It is produced by grade within building and grade within system. One copy is provided.

This report is very useful for reporting information to school boards and other groups because of its graphic presentation of the test results.

- Ⓐ Identification information for the building or system is provided here. This is a building report for Andrew Elementary School, grade 5.
- Ⓑ Test, total, or composite title for the report, building or system name, grade, and number tested are shown here.
- Ⓒ This area reports the percent of students in each Local Stanine compared to the percent of students in each National Stanine.
- Ⓓ The percent of students in the National Stanines is represented by the bell-shaped curve. The percent of students in the Local Stanines is represented by the striped bars. If an arrow appears above the histogram for a particular Stanine group, this indicates that more than 25 percent of the students in the building or system scored at this Stanine level.
- Ⓔ This area reports the percent of local students compared to the percent of national students scoring in each of three Stanine groupings.
- Ⓕ Conclusions about the distribution of scores in the three Stanine groupings are described in the narrative. In addition, local achievement is compared with national achievement.

**ADMINISTRATOR'S SUMMARY**  
**(Service 31)**

This report is produced by grade within building and grade within system.  
One copy is provided.

- Ⓐ Building or system identifying information is reported here. This is a building report for Andrew Elementary School, grade 5.
- Ⓑ The Number Tested by test, total, and composite are reported on this line.
- Ⓒ Page 1 reports Mean, Standard Deviation, and Percentiles by Raw Score, Standard Score, Grade-Equivalent, and National NCE.

Page 2 reports national and state summary data for Percentile Ranks and Stanines. For large districts local summary data are also provided.

## OKLAHOMA SUGGESTED LEARNER OUTCOMES REPORT

The *ITBS* and *TAP* objectives were matched to the Oklahoma Suggested Learner Outcomes (OSLO) objectives to create this report. Only those OSLO objectives having matches to *ITBS* or *TAP* objectives are reported.

One copy of a report listing students is provided by class for grades 3 and 5 and by building for grades 7, 9, and 11. In addition, one copy of a building and a system summary is provided.

The sample report is a class-level report.

- (A) Identifying information is reported in this section. This is sheet 1 of 5 for Cindy Reed's fifth grade class.
- (B) The OSLO matched objectives are listed down the page.
- (C) The N (number of students) in the Class (Building or System) is reported on this line. Only students who have taken all subtests and have a Total Composite score are included in this report.
- (D) This column reports the NUMBER OF ITEMS that were matched for each OSLO objective.
- (E) This column reports the NATIONAL AVERAGE Raw Score (RS) and Percent Correct (%C) for each objective.
- (F) The Class Average is reported in this column for grades 3 and 5. For grades 7, 9, and 11, the Building Average is reported.
- (G) Students are listed alphabetically across the top of the report.
- (H) For each OSLO objective, each student's Raw Score (RS) and Percent Correct (%C) are reported.

The building-level report for grades 3 and 5 contains building averages and class averages for each class group.

The system-level report contains system averages and building averages for each building in the system.

## LOCAL NORMS FREQUENCY DISTRIBUTION

Local Norms Frequency Distributions are created only for those school systems with 2,200 ADM or greater and are used for reporting Local Norms. One copy is provided by grade within system.

This is a three-page report. Pages 1 and 2 contain the distribution of National Percentile Ranks and associated Local Percentile Ranks. The bottom of page 2 contains the number of students (N) included in each test, total, and composite. Page 3 contains the Number (N) and Percent (%) in each of 10 National Percentile Rank groupings and each of the 9 National Stanines.

Page 3 of this report is shown in the sample.

- (A) This section contains identifying information.
- (B) The number (N) of students in the system obtaining scores in each of the 10 National Percentile Rank groups is reported here.
- (C) The percent (%) of students in the system obtaining scores in each of the 10 National Percentile Rank groups is reported here.
- (D) The number (N) of students in the system obtaining scores in each of the 9 National Stanine groups is reported here.
- (E) The percent (%) of students in the system obtaining scores in each of the 9 National Stanine groups is reported here.
- (F) At the bottom of the page, the number tested (N) is reported for each test, total, and composite. On the left, the total number of students tested (N TESTED) is reported.

## ADDITIONAL INFORMATION

This section provides brief answers to frequently asked questions about the scores and norms included on the Oklahoma reports.

**Question 1:** *Why are the NCE's or Percentile Ranks (PR's or NPR's) on the list report not exactly the same as in your booklet of norms tables?*

**Answer:** The scores in the computer include scores to the nearest tenth. Such tables are confusing and cause errors when hand-scoring is done. Hence, the Grade-Equivalents, Standard Scores, Percentile Ranks, and Normal Curve Equivalents in the norms booklets may differ slightly from those on the scoring service reports, especially in grade 3.

**Question 2:** *Why isn't a Percentile Rank (PR) of 99 always equal to a Normal Curve Equivalent (NCE) score of 99 and a PR of 98 always equal to an NCE of 93?*

**Answer:** When the PR-NCE tables were originally published under the USOE contract, the complete tables were to the nearest tenth. Hence, a PR of 99 can have an NCE of 99, 98, 97, or 96; a PR of 98 can have an NCE of 95, 94, 93, or 92; a PR of 1 can have an NCE of 1, 2, 3, or 4; etc. The Riverside Publishing Company uses the NCE tables originally supplied by the USOE rather than the abbreviated tables in the manuals.

**Question 3:** *What is the value of a simple list report of pupil scores?*

**Answer:** The list report of scores was and still is one of the most valuable and useful score reports. The type of analysis Riverside recommends is not very different from their recommendations of 25 years ago. Teachers, particularly elementary teachers, ought to scan across each student's NCE scores to look at relative strengths and weaknesses. Surprises could be marked with an exclamation point (!). Relatively low scores for students could be marked with a minus (-) sign and relative strengths with a (+) sign. A "Rule of Thumb" Riverside uses, based on each student's composite score, can be found on page 6 of this Guide.

It sounds complicated, but it takes about 30 seconds per student. How is it done so quickly? Look at the student's Composite score. Suppose it is 55. Subtract 12 ( $55 - 12 = 43$ ) and add 12 ( $55 + 12 = 67$ ). On the list report by the composite score, write 43-67. Then scan across the student's scores. Mark any NCE of 43 or less with a minus; mark NCE's of 67 or above with a plus.

Once this is completed, the teacher can ignore the averages and look for patterns. The plus and minus signs tell the teacher where relative strengths and weaknesses exist. For example, a lot of high-scoring students who have minuses are an early warning sign that instruction may have to be altered for some students.

For grades 7, 9, and 11, list reports are produced by grade and usually cross class groups. However, all teachers should have an Individual Performance Profile report on students because problems in a given academic or nonacademic class might be alleviated if the teacher knows about relative student weaknesses. Conversely, relative strengths in a given area could be turned to the student's or teacher's advantage in other classes. The Individual Performance Profiles could be distributed to teachers by class groups if list reports are not available.

**Question 4:** *How can a student be at the 99th percentile on the Composite score when he/she has only one or no test scores at the 99th percentile?*

**Answer:** Students who score high in all test areas do better than 1% of all students in the nation; hence, they are at the 99th percentile. Percentile Ranks are not averaged. Grade-Equivalent scores or Standard Scores are averaged and a national distribution of these scores determines which students are at the 99th percentile. One analogy is a track meet. A school can win a track meet without having a single individual winner IF they PLACE or SHOW in ALL events.

**Question 5:** *Which averages at the bottom of the list report are best for comparing tests for a class?*

**Answer:** The Percentile Rank (PR) or the Normal Curve Equivalent (NCE) average should be used. These are within-grade scores that can be compared across tests.

**Question 6:** *Why do some students not have a relative strength or weakness noted on the profile narrative?*

**Answer:** This happens when their overall profile is very flat. If a student's scores are all near or at the 70th percentile, for example, then the composite percentile will be near 70 and none of the test scores will be judged to be relatively high or low for the student. Also, as was noted in the discussion of the Profile Narrative, students with a composite score at or above the 96th percentile do not have relative strengths and weaknesses printed.

**Question 7:** *Some of the subskill averages appear to be incorrect on my Service 6 Item Performance Record reports. For example, for the four items on one subskill, the percents correct are 66, 65, 62, and 60. The average is 63.25, but the computer report has 64 for the average. What happened?*

**Answer:** This happens occasionally and is due to rounding. If the actual item percents correct are 66.4, 65.3, 62.3, and 60.1, the average is 63.525 or 64 for the subskill area.

**Question 8:** *How can the percent correct on my item analysis reports be above the national percent correct on all or most subskills, but my NCE average and PR be 49?*

**Answer:** This happens infrequently, but it is possible. The percent correct is a raw score. The NCE, PR, and Standard Score are based on the total distribution of raw scores, not an average. The relationship between raw scores and Standard Scores is not perfectly monotonic; that is, an increase of one raw score may result in a change of one, two, or three Standard Scores. Thus, two distributions of scores may have the same raw score average but different Standard Score averages, different NCE's, and different PR's. See the concluding comments in the interpretive information for Service 6 on page 29 of this *Guide*.

## REPORTING INFORMATION TO VARIOUS GROUPS

The information below provides general guidelines for reporting information to various groups. Local practices for disseminating information will vary considerably and, to some extent, will be dictated by dissemination procedures used in the past.

### Reporting to Students and Parents

The parent's copy of the Profile Narrative is intended for use with the parents, but could also be used with students. Be prepared to respond to questions regarding the percentile bands even though these are explained in the second paragraph of the narrative.

The scores the authors recommend providing to parents and students are Percentile Ranks. These scores are comparable across tests within a grade and are usually understood by students and parents. Percentile Ranks for all tests, totals, and composites are listed on the Profile Narrative.

### Reporting to School Administrators and School Boards

The basic rules are to keep it simple and to provide data that are comparable to data provided in the past. This does not preclude introducing new data. However, you might raise questions if there is no continuity with reporting procedures used in the past.

### Reporting to the Media

The basic rules are to be prepared, be objective, keep it simple, and provide data comparable to what has been provided before, plus any new data.

Most newspapers are interested in one type of score—averages—and often stress one or two tests such as reading or math. The item data provide information which can help focus on specific instruction in certain skills to improve performance of skills on which the performance is unexpectedly low and to maintain very good subskill and test performance. Also, low

achievement on certain objectives or skill areas may be justified if they have not yet been covered in the local curriculum, especially when data for upper grades indicates that the relative weakness in the lower grades no longer exists.

**Too often the focus is on low test scores and low skill scores. Strengths and weaknesses abound in almost all test results and both should be discussed.**

## INTERPRETATION AIDS

The three pages that follow are provided to aid in the interpretation of the test results.

The first page is a Worksheet for identifying strengths and weaknesses for a class or student. The directions for completing it are contained on the sheet.

The second and third pages are provided for plotting the National Percentile Ranks for *ITBS* and *TAP*. At the bottom of each sheet, enter the National Percentile Rank for each test, total, and composite and then plot these PR's on the chart for a graphic representation of student performance.

**Class/Student:** \_\_\_\_\_

- \_\_\_\_\_ Composite NCE = \_\_\_\_\_

- NCE - 12 = \_\_\_\_ (Subtest scores at or lower than this are relative weaknesses)**

- | SUBTEST AREAS |     |  |            |     |
